Early Canadian Economic Foundations

The early _____ of Canada was heavily influenced by its natural resources. From the very beginning, the _____ trade became a cornerstone, with European traders exchanging goods for valuable animal pelts. The _____ peoples played a crucial role in this trade, acting as intermediaries and skilled hunters. Another key sector was the _____ industry, particularly in the Atlantic region, where cod was abundant. This not only supported local needs but also supplied international _____. Agriculture also became an important part of Canada's economic foundation. The fertile lands of the _____ River Valley were ideal for growing crops like wheat, which were essential for both domestic consumption and _____. Lumbering was another significant industry, with the vast forests of Canada providing timber not only for domestic use but for export to Britain and other countries. With the Industrial _____, Canada's economy began to diversify and grow further. The construction of the _____, particularly the Lachine Canal, facilitated trade and transportation, boosting economic activities. The discovery of _____ in various parts of Canada also contributed to the economic landscape, with mining _____ beginning to take shape. Throughout these developments, the role of the _____ Empire was significant. Policies and investments from Britain influenced Canada's economic priorities and development paths. However, the _____ and adaptability of the Canadian people were also key to navigating the challenges and opportunities of their economic _____. In summary, the early economy of Canada was shaped by its natural resources, the enterprising spirit of its people, and its _____ with Indigenous communities and international partners. This foundation set the stage for the diverse and robust economy that _____ is known for today.
